Dear Twitpic Community - thank you for all the wonderful photos you have taken over the years. We have now placed Twitpic in an archived state. Mathematical economics is the application of mathematical methods to represent theories and analyze problems in economics. By convention, these applied methods are beyond simple geometry, such as differential and integral calculus, difference and differential equations, matrix algebra, mathematical programming, and other computational methods. ...Here I record what I have been able to learn about the origins of some of the terms we use in international economics, both who introduced their meanings and who first gave them their names, if those are not the same people. Appropriate technology resources. Lots of these resources are old -- some more than a century old. This is NOT because appropriate technology is nostalgic, it's because old references often contain valuable and useful information that simply is not available now.
